E: waterworkshops@triangleassociates.com

This lesson is a perfect introduction to units on ecosystems, natural resources, personal health and government issues.

This popular workshop has station activities that use water.

Students learn about drinking water as they rotate through activity stations and wrap up with a trivia game. A student activity sheet is completed by each student during the period as an assessment tool.

Key lesson messages:

- Where drinking water comes from
- How water is used and wasted
- Why conservation is important
- How actions impact the environment

The workshop gets students thinking about their own water use and its impact on others.
